

Roadmap $\Rightarrow$ AI Engineer

Start Here

Phase-1

Python Basics

- variables & Functions
- coding Exercise
- Data Structures
- object oriented programming
- library like OS, Math
- Debugging skills

@codingdidi

Mathematics

- Linear Algebra
- Calculus Fundamental
- Statistics and Probability

Data Manipulation Skills

- Numpy
- Pandas
- Matplotlib, seaborn, plotly, Streamlit

Additional

- * Case studies.
- * AI papers.

Phase-2

→ Core Machine learning

* ML Concepts

- Types of ML Model
- How they are build.
- Try to build using Numpy.
- Understand the architect

* Model Evaluation Technique.

→ Practical ML with Scikit-Learn, P

Phase-3

→ Deep Learning learning @codingdidi

- Fundamentals and Neural Network.
- CNN
- RNN
- Transformers.
- Transfer Learning

→ Practical implementation using Pytorch and Tensorflow

Phase 4

→ Project Building

- * Smart Demand Forecasting
- * Sentiment Analysis
- * Churn Prediction Model
- * Dynamic Pricing Model
- * Loan Default Prediction
- * Time Series Forecasting System
- * Comment Toxicity Classification
- * Fake News Detection

Phase 5

→ Version Control

→ Git

→ Github

→ Gitlab

@coolingdidi

→ Containerization

→ Docker

→ MLOps Tools

→ MLFlow

→ DVC

→ KubeFlow

→ AWS SageMaker / Google Vertex AI
