

* Reasoning Model *

Goal :- Build AI that can think, Reason, Plan & Solve.

↓
Not just predict the next word, But THINK before answering.

@codingdidi

Real problems need thinking.

Normal LLMs = pattern matching / memorization
Fail on → Multi-step logic, planning, math, debugging, long-term consistency.

Reasoning Model → thinks step-by-step.
Uses → chain of thought, decomposition, verification, self-correction.

Build AI that acts like an Engineer.

Basic AI
(Chatbot)

↓

Responds

Reasoning AI
(problem solver)

↔ Analyzes

Surface answer ↔ Deep analysis

Text answers ↔ Problem solving

Fast prediction ↔ Logical thinking

One-shot output ↔ Iterative refinement

Companies invest in reasoning systems because future AI = problem solving, not just conversation.

Critical in Complex Domain

Coding (debug, test, optimize)

Cybersecurity (threat analysis)

@codihyolide

Robotics (plan + adapt)

Finance (risk, strategy)

Real Examples

OpenAI — o1, o1-mini

Google DeepMind → Gemini

Anthropic →→ Claude

XAI — ~~Claude~~ Grok
